

11: Crafting Reports

Environmental Data Analytics | John Fay & Luana Lima | Developed by Kateri Salk

Spring 2022

LESSON OBJECTIVES

1. Describe the purpose of using R Markdown as a communication and workflow tool
2. Incorporate Markdown syntax into documents
3. Communicate the process and findings of an analysis session in the style of a report

USE OF R STUDIO & R MARKDOWN SO FAR...

1. Write code
2. Document that code
3. Generate PDFs of code and its outputs
4. Integrate with Git/GitHub for version control

BASIC R MARKDOWN DOCUMENT STRUCTURE

1. **YAML Header** surrounded by `---` on top and bottom
 - YAML templates include options for html, pdf, word, markdown, and interactive
 - More information on formatting the YAML header can be found in the cheat sheet
2. **R Code Chunks** surrounded by `"on top and bottom" + Create using Cmd/Ctrl+Alt+I`
 - Can be named `{r name}` to facilitate navigation and autoreferencing
 - Chunk options allow for flexibility when the code runs and when the document is knitted
3. **Text** with formatting options for readability in knitted document

RESOURCES

Handy cheat sheets for R markdown can be found: [here](#), and [here](#).

There's also a quick reference available via the **Help**→**Markdown Quick Reference** menu.

Lastly, this website give a great & thorough overview.

THE KNITTING PROCESS

- The knitting sequence
- Knitting commands in code chunks:
- `include = FALSE` - code is run, but neither code nor results appear in knitted file
- `echo = FALSE` - code not included in knitted file, but results are

- `eval = FALSE` - code is not run in the knitted file
- `message = FALSE` - messages do not appear in knitted file
- `warning = FALSE` - warnings do not appear...
- `fig.cap = "..."` - adds a caption to graphical results

WHAT ELSE CAN R MARKDOWN DO?

See: <https://rmarkdown.rstudio.com> and class recording. * Languages other than R... * Various outputs...

WHY R MARKDOWN?

<Fill in our discussion below with bullet points. Use italics and bold for emphasis (hint: use the cheat sheets or Help →Markdown Quick Reference to figure out how to make bold and italic text).

- *version control*
- *user friendly, low learning curve*
- *embedded plots and tables that are easily updated*

TEXT EDITING CHALLENGE

Create a table below that details the example datasets we have been using in class. The first column should contain the names of the datasets and the second column should include some relevant information about the datasets. (Hint: use the cheat sheets to figure out how to make a table in Rmd)

File name	Description
NWIS_SiteInfo_NE_RAW.csv	NWS site information
NTL-LTER_Lake_Carbon_Raw.csv	NTL LTER lake: Carbon data

R CHUNK EDITING CHALLENGE

Installing packages

Create an R chunk below that installs the package `knitr`. Instead of commenting out the code, customize the chunk options such that the code is not evaluated (i.e., not run).

Setup

Create an R chunk below called “setup” that checks your working directory, loads the packages `tidyverse`, `lubridate`, and `knitr`, and sets a ggplot theme. Remember that you need to disable R throwing a message, which contains a check mark that cannot be knitted.

Load the `NTL-LTER_Lake_Nutrients_Raw` dataset, display the head of the dataset, and set the date column to a date format.

Customize the chunk options such that the code is run but is not displayed in the final document.

```
## lakeid lakename year4 daynum sampleddate depth_id depth tn_ug tp_ug nh34 no23
## 1      L Paul Lake 1991    140    5/20/91         1  0.00   538    25   NA   NA
## 2      L Paul Lake 1991    140    5/20/91         2  0.85   285    14   NA   NA
## 3      L Paul Lake 1991    140    5/20/91         3  1.75   399    14   NA   NA
## 4      L Paul Lake 1991    140    5/20/91         4  3.00   453    14   NA   NA
## 5      L Paul Lake 1991    140    5/20/91         5  4.00   363    13   NA   NA
## 6      L Paul Lake 1991    140    5/20/91         6  6.00   583    37   NA   NA
```

```
## po4 comments
## 1 NA
## 2 NA
## 3 NA
## 4 NA
## 5 NA
## 6 NA
```

Data Exploration, Wrangling, and Visualization

Create an R chunk below to create a processed dataset do the following operations:

- Include all columns except lakeid, depth_id, and comments
- Include only surface samples (depth = 0 m)
- Drop rows with missing data

```
NTL_LTER_processed<-subset(NTL_LTER,select = -c(lakeid,depth_id,comments))
NTL_LTER_processed<-filter(NTL_LTER_processed,depth == 0)%>%drop_na()
```

Create a second R chunk to create a summary dataset with the mean, minimum, maximum, and standard deviation of total nitrogen concentrations for each lake. Create a second summary dataset that is identical except that it evaluates total phosphorus. Customize the chunk options such that the code is run but not displayed in the final document.

Create a third R chunk that uses the function `kable` in the `knitr` package to display two tables: one for the summary dataframe for total N and one for the summary dataframe of total P. Use the `caption = " "` code within that function to title your tables. Customize the chunk options such that the final table is displayed but not the code used to generate the table.

```
##
##
## Table: Table 2: Surface Samples: Total Nitrogen
##
## lakename          N.mean    N.min    N.max    N.sd
## -----
## Central Long Lake    690.0469  343.020  953.063  209.09341
## Crampton Lake        362.6813  353.380  376.304  12.05748
## East Long Lake       810.7834  380.620  2608.956  335.41457
## Hummingbird Lake    1036.6695  779.053  1221.960  204.36889
## Paul Lake            368.7564   45.670   628.625  106.34741
## Peter Lake           561.8752  219.720  2048.151  305.64909
## Tuesday Lake         423.5605  237.363   554.418   78.84522
## West Long Lake       762.6017  303.170  2870.302  402.95992
##
##
## Table: Table 3: Surface Samples: Total Phosphorous
##
## lakename          P.mean    P.min    P.max    P.sd
## -----
## Central Long Lake    21.70981   8.190   37.270   7.076388
## Crampton Lake        11.16033   5.803   15.555   4.946759
## East Long Lake       29.28984   8.000  101.050  17.375710
## Hummingbird Lake    36.21925  32.765   42.119   4.146717
## Paul Lake            10.45606   1.222   36.070   4.805142
## Peter Lake           18.39153   0.000   64.383  10.976205
## Tuesday Lake         11.71853   6.325   18.663   3.044289
```

```
## West Long Lake      19.82981    2.690    63.243    10.541276
```

Create a fourth and fifth R chunk that generates two plots (one in each chunk): one for total N over time with different colors for each lake, and one with the same setup but for total P. Decide which geom option will be appropriate for your purpose, and select a color palette that is visually pleasing and accessible. Customize the chunk options such that the final figures are displayed but not the code used to generate the figures. In addition, customize the chunk options such that the figures are aligned on the left side of the page. Lastly, add a fig.cap chunk option to add a caption (title) to your plot that will display underneath the figure.

Total N over time

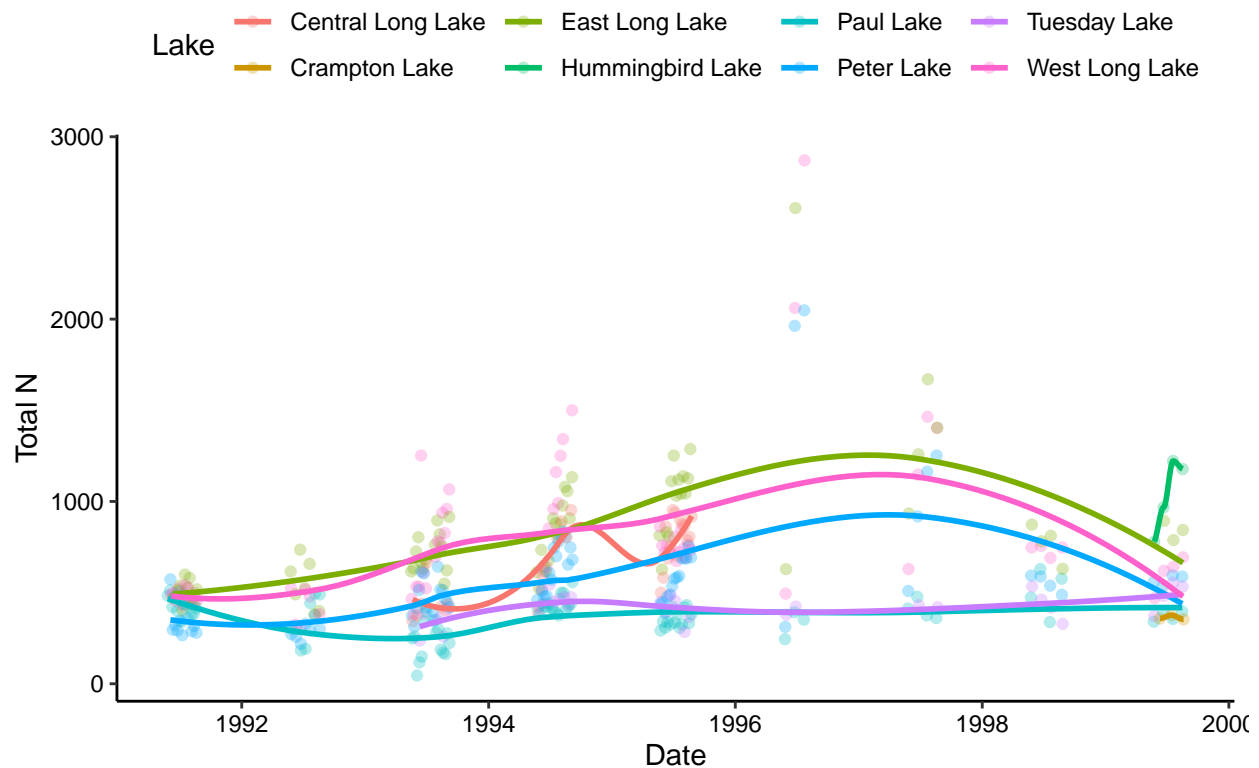

Figure 1: Figure 1: Total Nitrogen

Communicating results

Write a paragraph describing your findings from the R coding challenge above. This should be geared toward an educated audience but one that is not necessarily familiar with the dataset. Then insert a horizontal rule below the paragraph. Below the horizontal rule, write another paragraph describing the next steps you might take in analyzing this dataset. What questions might you be able to answer, and what analyses would you conduct to answer those questions?

From the results we can see that for most lakes in the dataset, total nitrogen and total phosphorous increase first and then decrease over time.

I would like to explore whether total nitrogen and total phosphorous are the same across different depths of lake using ANOVA analysis.

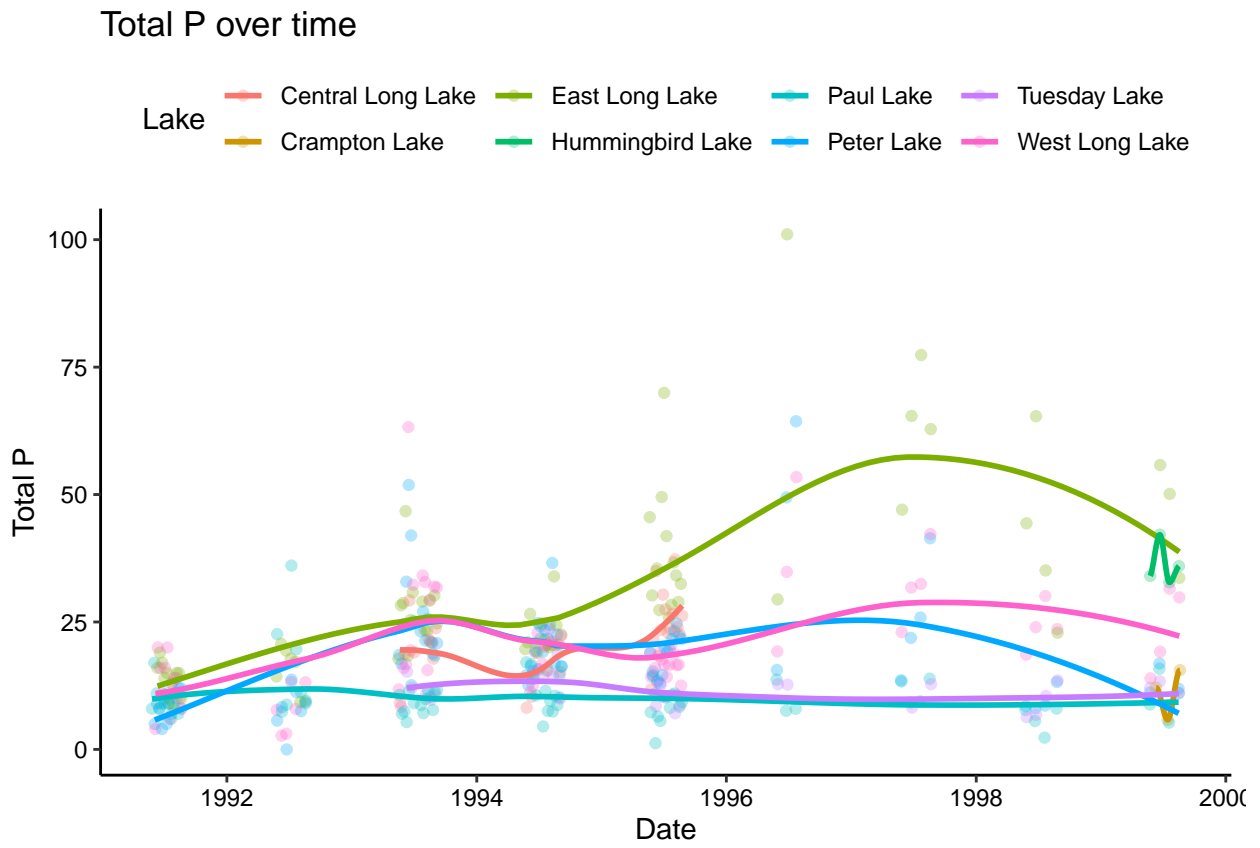

Figure 2: Figure 2: Total Phosphorous

KNIT YOUR PDF

When you have completed the above steps, try knitting your PDF to see if all of the formatting options you specified turned out as planned. This may take some troubleshooting.

OTHER R MARKDOWN CUSTOMIZATION OPTIONS

We have covered the basics in class today, but R Markdown offers many customization options. A word of caution: customizing templates will often require more interaction with LaTeX and installations on your computer, so be ready to troubleshoot issues.

Customization options for pdf output include:

- Table of contents
- Number sections
- Control default size of figures
- Citations
- Template (more info [here](#))

pdf_document:

toc: true

number_sections: true

fig_height: 3

fig_width: 4

citation_package: natbib

template:
